Australian Paper launches carbon neutral paper

A3P congratulates Australian Paper on developing carbon neutral printing and publication papers – a first for the Australian market.

Accredited through the Australian Greenhouse Office (AGO) Greenhouse Friendly Program, the ENVI range offers an effective way for companies to continue their reduction of carbon emissions.

The ENVI range is a further example of how the Australian plantation products and paper industry is providing solutions to the global climate change challenge.

A3P CEO Mr Neil Fisher said “A3P applauds Australian Paper for adding another environmentally responsible choice to its range of high quality papers products.

“Australia Paper’s carbon neutral range is 100 per cent Australian made and produced under the highest environmental and manufacturing credentials including ISO14001 and ISO9001.

“All fibre used in the ENVI range is sourced from sustainably managed plantations certified under the Forest Stewardship Council (FSC), an internationally recognised certification scheme.

“Consumers buying certified products, either under FSC or the Australian Forestry Standard (PEFC), can be assured they have been made using fibre sourced from sustainably grown forests.

“Australian Paper, along with all A3P members, is committed to a range of environmental targets covering greenhouse gas emissions, paper recycling, sustainable forest management certification and many more, through A3P’s Sustainability Action Plan.

“A3P is committed to working alongside our members, Governments and other industries to develop practical solutions to climate change”, he said.
